MARTRON DEFOAMER 350

1 PRODUCT DESCRIPTION

Martron Defoamer 350 was formulated for use as a biological effluent defoamer with a high spread rate to afford efficient foam control across the system. When metered at full strength, **Martron Defoamer 350** exhibits very quick flash knockdown and excellent stamina. **Martron Defoamer 350** will control foam on most industrial and municipal effluent systems in the digestors, aeration ponds, in the flumes and at the river outfall.

2 TYPICAL APPLICATIONS

- * Biological Wastewater Treatment
- * Aeration Basins
- * Sludge Digestors
- * Paper Machines

Martron Defoamer 350 disperse in water or effluent and may be fed as is or from a day tank to the effluent point of addition. **Martron Defoamer 350** loses significant efficiency if pre-diluted with water for use.

Martron Defoamer 350 may be added directly to the incoming stock, to the aerators, or the flume with most metering pumps. The product will immediately spread to a monolayer to control foam at the surface. Experience has shown that the best foam control is observed when **Martron Defoamer 350** is metered in undiluted form. **Martron Defoamer 350** is generally used at a dosage of 2 to 20% /volume or full strength.

3 RESPONSIBLE CARE

For complete safety, health, personal protection and first aid information, refer to the Safety Data Sheet (SDS).
